# **COMMUNITY'S TANDEM DRIVE LOUDSPEAKERS SET TO SHIP**

*Portable and powerful product group makes NAMM debut*

**ANAHEIM, CA**, January 16, 2003--Community's new Tandem Drive loudspeakers will be shown at this year's Winter NAMM in booth #6953. Comprising a pair of full-range cabinets and two subwoofer systems, the product group brings power, clarity, and portability to DJ, corporate, house of worship, and live performance applications.

Building a Tandem Drive system is as easy as topping-off either of two subwoofers (models TD2115 and TD2118) with one of two full-range enclosures (models TD2212 and TD2215) using steel mounting poles. Quick to set up and just as simple to tear down, Tandem Drive systems offer the versatility to accommodate virtually any audio need with reliable and professional quality sound reinforcement.

Constructed from lightweight Luaun core plywood, each Tandem Drive loudspeaker enclosure features ErgoGrip handles, and is painted with TufCoat™, a virtually indestructible finish with an amazingly high resistance to dents, dings, scratches, and other injuries. Inside each box, proprietary low frequency drivers feature Community's new, patented Cool-Coil technology. And to keep you up-and-running no matter how loud it gets, every model is internally safeguarded with IntelliSense™, a protective circuit which guarantees maximum output minus the risk of speaker damage.

At 49 pounds, the full-range TD2212 is the lightest and most compact loudspeaker within the Tandem Drive Series. Employing a two-way design housing dual 12-inch Cool-Coil woofers and Community's UC1 high frequency driver, the device is ideally suited for smaller systems.

Perfect for high-SPL environments, the TD2215 houses dual 15-inch Cool-Coil low frequency drivers and the same horn-loaded, 90x40 UC1 high frequency section as the TD2212. Outfitted with a non-metallic diaphragm to increase internal dampening, reduce ringing, and provide more accurate response as well as extremely low distortion, the low-mass UC1 high frequency driver is ferrofluid cooled to dissipate heat quickly.

The largest of the Tandem Drive subwoofers, the potent TD2118 is based around a design which packs dual 18-inch Cool-Coil drivers into a vented cabinet available with optional four heavy-duty casters. Conversely, dual 15-inch Cool-Coil drivers are responsible for the rich, full bass sound of the TD2115.

Available around the world from authorized Community dealers, Tandem Drive Series loudspeakers range in price from \$659 (model 2212) to \$1399 (model TD2118).
